Problems & How to Fix

— 75/100

First Contentful Paint

Result: 3.8 s

Why: The first visible content is taking 3.8 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.0 s

Why: The main visible content is taking 4.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Speed Index

Result: 5.9 s

Why: Visible page content is appearing slowly (5.9 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 136 KiB

Why: Lighthouse reported Est savings of 136 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/logo4-new.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part5.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part6.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part4.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part2.webp>

Document request latency

Result: Est savings of 900 ms

Why: Lighthouse reported Est savings of 900 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 150 ms

Why: Lighthouse reported Est savings of 150 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Improve image delivery

Result: Est savings of 405 KiB

Why: Lighthouse reported Est savings of 405 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div#swiper-wrapper-b3d4a62f5ce28559 > div.swiper-slide > div.logo-box > img`
- `li.nav-item > button.nav-link > span > img`
- `div#tab1 > div.tab-card > div.tab-icon > img`
- `li.nav-item > button.nav-link > span > img`

- `li.nav-item > button.nav-link > span > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 990 ms

Why: Lighthouse reported Est savings of 990 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.7 s

Why: Lighthouse reported 6.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Reduce unused JavaScript

Result: Est savings of 23 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

Minimize main-thread work

Result: 4.9 s

Why: Lighthouse reported 4.9 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`

Reduce initial server response time

Result: Root document took 1,000 ms

Why: Lighthouse reported Root document took 1,000 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric]

(<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchonic.online/>

<https://goc.searchonic.online/about>

Problems & How to Fix

— 71/100

First Contentful Paint

Result: 2.9 s

Why: The first visible content is taking 2.9 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 5.6 s

Why: The main visible content is taking 5.6 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Speed Index

Result: 4.8 s

Why: Visible page content is appearing slowly (4.8 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 25 KiB

Why: Lighthouse reported Est savings of 25 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/js/vendor/bootstrap.min.js?ver=5.3.3>

Document request latency

Result: Est savings of 440 ms

Why: Lighthouse reported Est savings of 440 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 1,100 ms

Why: Lighthouse reported Est savings of 1,100 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 5.6 s

Why: Lighthouse reported 5.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 5.7 s

Why: Lighthouse reported 5.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.footer-grid > div.footer-card > div.partner > img`
- `div.goc-container > div.header-container > a.logo > img`
- `div.footer-grid > div.footer-card > a.footer-logo > img`
- `div.why-col > div.why-card > div.icon > img`
- `div.why-col > div.why-card > div.icon > img`

Avoid multiple page redirects

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/about>

- <https://goc.searchonic.online/about/>

<https://goc.searchonic.online/revenue-cloud-implementation>

Problems & How to Fix

— 21/100

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 8.5 s

Why: The main visible content is taking 8.5 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 1,310 ms

Why: The browser is spending too much time executing long JavaScript tasks (1,310 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.44

Why: Page elements are moving unexpectedly during loading (0.44). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 6.1 s

Why: Visible page content is appearing slowly (6.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 161 KiB

Why: Lighthouse reported Est savings of 161 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/salesforce-revenue-cloud-implementation-Services.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/slow-quote-to-cash-cycles-and-delayed-revenue.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/difficulty-handling-subscriptions-and-usage-based-models.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/fragmented-systems-with-no-single-revenue-view.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/manual-error-prone-quoting-and-billing.webp>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 440 ms

Why: Lighthouse reported Est savings of 440 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 380 ms

Why: Lighthouse reported Est savings of 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 643 KiB

Why: Lighthouse reported Est savings of 643 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.benefit-card > div.green > div.icon > img`

- `div.benefit-card > div.pink > div.icon > img`
- `div.benefit-card > div.blue > div.icon > img`
- `div.benefit-card > div.purple > div.icon > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 550 ms

Why: Lighthouse reported Est savings of 550 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/footer.css?ver=1784272855>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

Time to Interactive

Result: 10.8 s

Why: Lighthouse reported 10.8 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 820 ms

Why: Lighthouse reported 820 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Minimize main-thread work

Result: 10.1 s

Why: Lighthouse reported 10.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- `https://goc.searchonic.online/revenue-cloud-implementation`
- `https://goc.searchonic.online/revenue-cloud-implementation/`

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

<https://goc.searchonic.online/agentforce-for-manufacturing>

Problems & How to Fix

— 57/100

First Contentful Paint

Result: 2.5 s

Why: The first visible content is taking 2.5 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.6 s

Why: The main visible content is taking 3.6 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 300 ms

Why: The browser is spending too much time executing long JavaScript tasks (300 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.438

Why: Page elements are moving unexpectedly during loading (0.438). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.1 s

Why: Visible page content is appearing slowly (5.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 69 KiB

Why: Lighthouse reported Est savings of 69 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/crm.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Operational-delays-can-reduce-productivity.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Automotive-and-Component-Manufacturing.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Industrial-Distribution.webp>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,100 ms

Why: Lighthouse reported Est savings of 1,100 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 230 ms

Why: Lighthouse reported Est savings of 230 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 38 KiB

Why: Lighthouse reported Est savings of 38 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 400 ms

Why: Lighthouse reported Est savings of 400 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.0 s

Why: Lighthouse reported 6.0 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 380 ms

Why: Lighthouse reported 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.6 s

Why: Lighthouse reported 6.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to

minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.card > div.circle-area > div.icon > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`
- `div.footer-grid > div.footer-card > div.partner > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-manufacturing>
- <https://goc.searchchonic.online/agentforce-for-manufacturing/>

Reduce initial server response time

Result: Root document took 820 ms

Why: Lighthouse reported Root document took 820 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric]

(<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-manufacturing/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the

most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

<https://goc.searchonic.online/agentforce-for-medical-devices>

Problems & How to Fix

— 59/100

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.5 s

Why: The main visible content is taking 4.5 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.5 s

Why: Visible page content is appearing slowly (4.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 85 KiB

Why: Lighthouse reported Est savings of 85 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/crm.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/discovery.png>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

Max Potential First Input Delay

Result: 490 ms

Why: Lighthouse reported 490 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Avoid enormous network payloads

Result: Total size was 14,625 KiB

Why: Lighthouse reported Total size was 14,625 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Large network payloads cost users real money and are highly correlated with long load times. [Learn how to reduce payload sizes]

(<https://developer.chrome.com/docs/lighthouse/performance/total-byte-weight/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/robotic-welding.mp4>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://fonts.gstatic.com/s/inter/v20/UcCm3FwrK3iLTcvnUwQT9mI1F54.woff2>
- <https://fonts.gstatic.com/s/inter/v20/UcCo3FwrK3iLTcviYwYZ8UA3.woff2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

Minimize main-thread work

Result: 7.9 s

Why: Lighthouse reported 7.9 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-cloud-for-manufacturing>
- <https://goc.searchchonic.online/revenue-cloud-for-manufacturing/>

Reduce initial server response time

Result: Root document took 640 ms

Why: Lighthouse reported Root document took 640 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchonic.online/revenue-cloud-for-manufacturing/>

Avoid large layout shifts

Result: 3 layout shifts found

Why: Lighthouse reported 3 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.goc-container > div.hero-wrapper > div.hero-content > p`
- `div.hero-wrapper > div.hero-content > h1.h1-heading > span`

<https://goc.searchonic.online/revenue-cloud-for-food-beverage>

Problems & How to Fix

— 69/100

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.0 s

Why: The main visible content is taking 3.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.41

Why: Page elements are moving unexpectedly during loading (0.41). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.6 s

Why: Visible page content is appearing slowly (4.6 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 54 KiB

Why: Lighthouse reported Est savings of 54 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/uploads/2026/07/Seasonal-demand-changes-rapidly.webp>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/efficiency.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/billing.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/automation.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 380 ms

Why: Lighthouse reported Est savings of 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 130 ms

Why: Lighthouse reported Est savings of 130 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 50 KiB

Why: Lighthouse reported Est savings of 50 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.card > div.circle-area > div.icon > img`
- `div.card > div.circle-area > div.icon > img`

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 920 ms

Why: Lighthouse reported Est savings of 920 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 4.8 s

Why: Lighthouse reported 4.8 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.card > div.circle-area > div.icon > img`
- `div.card > div.circle-area > div.icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.
[Learn how to avoid page redirects]
(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchonic.online/revenue-cloud-for-food-beverage>
- <https://goc.searchonic.online/revenue-cloud-for-food-beverage/>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Time to Interactive

Result: 4.2 s

Why: Lighthouse reported 4.2 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric]

(<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Minimize main-thread work

Result: 5.3 s

Why: Lighthouse reported 5.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.card > div.circle-area > div.icon > img`
- `div.card > div.circle-area > div.icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects] (<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display]

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides]

(<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 31 KiB

Why: Lighthouse reported Est savings of 31 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 650 ms

Why: Lighthouse reported Est savings of 650 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.1 s

Why: Lighthouse reported 6.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 7.1 s

Why: Lighthouse reported 7.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`
- `div.footer-grid > div.footer-card > div.partner > img`
- `div.goc-container > div.header-container > a.logo > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-food-beverage>
- <https://goc.searchchonic.online/agentforce-for-food-beverage/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

<https://goc.searchonic.online/agentforce-for-martech>

Problems & How to Fix

— 68/100

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.0 s

Why: The main visible content is taking 3.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.41

Why: Page elements are moving unexpectedly during loading (0.41). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.1 s

Why: Visible page content is appearing slowly (5.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 50 KiB

Why: Lighthouse reported Est savings of 50 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Manual-Work-Slows-Tech-Growth.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Technology-Startups-Scale-Ups.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 910 ms

Why: Lighthouse reported Est savings of 910 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency->

tree) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 520 ms

Why: Lighthouse reported Est savings of 520 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 4.6 s

Why: Lighthouse reported 4.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Minimize main-thread work

Result: 5.7 s

Why: Lighthouse reported 5.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`
- `div.footer-grid > div.footer-card > div.partner > img`
- `div.goc-container > div.header-container > a.logo > img`
- `div.footer-grid > div.footer-card > a.footer-logo > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchonic.online/agentforce-for-martech>
- <https://goc.searchonic.online/agentforce-for-martech/>

Reduce initial server response time

Result: Root document took 620 ms

Why: Lighthouse reported Root document took 620 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-martech/>

Avoid large layout shifts

Result: 2 layout shifts found

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 5.7 s

Why: The main visible content is taking 5.7 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.441

Why: Page elements are moving unexpectedly during loading (0.441). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.1 s

Why: Visible page content is appearing slowly (5.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 59 KiB

Why: Lighthouse reported Est savings of 59 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/saas-and-subscription.svg>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Disconnected-Revenue-Processes-Slow-Growth.-Agentforce-Unifies-Every-Revenue-Step.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/financial-services.png>

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/billing.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,150 ms

Why: Lighthouse reported Est savings of 1,150 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 140 ms

Why: Lighthouse reported Est savings of 140 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Improve image delivery

Result: Est savings of 32 KiB

Why: Lighthouse reported Est savings of 32 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.card > div.circle-area > div.icon > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 900 ms

Why: Lighthouse reported Est savings of 900 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.5 s

Why: Lighthouse reported 6.5 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 7.5 s

Why: Lighthouse reported 7.5 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work] (<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions] (https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.card > div.circle-area > div.icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.

[Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-revenue-management>
- <https://goc.searchchonic.online/agentforce-revenue-management/>

Reduce initial server response time

Result: Root document took 840 ms

Why: Lighthouse reported Root document took 840 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-revenue-management/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `body.wp-singular > section.why-choose-section`

<https://goc.searchonic.online/subscription-billing-management>

Problems & How to Fix

— 69/100

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 2.9 s

Why: The main visible content is taking 2.9 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.435

Why: Page elements are moving unexpectedly during loading (0.435). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.5 s

Why: Visible page content is appearing slowly (4.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 46 KiB

Why: Lighthouse reported Est savings of 46 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Turn-every-subscription-cycle-into-predictable-revenue.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/automation.png>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/inflation-rate.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,150 ms

Why: Lighthouse reported Est savings of 1,150 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting `[font-display]`

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with `[font metric overrides]` (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about `[forced reflows]` (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 69 KiB

Why: Lighthouse reported Est savings of 69 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by

making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 1,000 ms

Why: Lighthouse reported Est savings of 1,000 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/footer.css?ver=1784272855>

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.1 s

Why: Lighthouse reported 6.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/subscription-billing-management>
- <https://goc.searchchonic.online/subscription-billing-management/>

Reduce initial server response time

Result: Root document took 770 ms

Why: Lighthouse reported Root document took 770 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

<https://goc.searchonic.online/cpq-billing-integration>

Problems & How to Fix

— 67/100

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.2 s

Why: The main visible content is taking 3.2 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.0 s

Why: Visible page content is appearing slowly (5.0 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 56 KiB

Why: Lighthouse reported Est savings of 56 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/uploads/2026/07/Stop-losing-time-between-quote-and-invoice-1.webp>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/efficiency.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/automation.png>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,170 ms

Why: Lighthouse reported Est savings of 1,170 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 160 ms

Why: Lighthouse reported Est savings of 160 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display]

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides]

(<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Improve image delivery

Result: Est savings of 36 KiB

Why: Lighthouse reported Est savings of 36 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 690 ms

Why: Lighthouse reported Est savings of 690 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.3 s

Why: Lighthouse reported 6.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.

[Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/cpq-billing-integration>
- <https://goc.searchchonic.online/cpq-billing-integration/>

Reduce initial server response time

Result: Root document took 830 ms

Why: Lighthouse reported Root document took 830 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/cpq-billing-integration/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

Problems & How to Fix

— 60/100

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.3 s

Why: The main visible content is taking 4.3 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.5 s

Why: Visible page content is appearing slowly (4.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 57 KiB

Why: Lighthouse reported Est savings of 57 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- `body.wp-singular > section.hero-section`

<https://goc.searchonic.online/contact-us>

Problems & How to Fix

— 75/100

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 2.7 s

Why: The main visible content is taking 2.7 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 320 ms

Why: The browser is spending too much time executing long JavaScript tasks (320 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.147

Why: Page elements are moving unexpectedly during loading (0.147). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.5 s

Why: Visible page content is appearing slowly (5.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 65 KiB

Why: Lighthouse reported Est savings of 65 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/uploads/2026/07/flag-india.svg>
- <https://goc.searchonic.online/wp-content/uploads/2026/07/flag-usa.svg>
- <https://goc.searchonic.online/wp-content/uploads/2026/07/flag-uae.svg>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchonic.online/wp-content/uploads/2026/07/flag-australia.svg>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 390 ms

Why: Lighthouse reported Est savings of 390 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 160 ms

Why: Lighthouse reported Est savings of 160 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 54 KiB

Why: Lighthouse reported Est savings of 54 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 900 ms

Why: Lighthouse reported Est savings of 900 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/footer.css?ver=1784272855>

Time to Interactive

Result: 5.4 s

Why: Lighthouse reported 5.4 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 380 ms

Why: Lighthouse reported 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 8.8 s

Why: Lighthouse reported 8.8 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]
(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`

Avoid multiple page redirects

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]
(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- `https://goc.searchchonic.online/contact-us`
- `https://goc.searchchonic.online/contact-us/`

Avoid large layout shifts

Result: 3 layout shifts found

Why: Lighthouse reported 3 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.contact-revenue-stats`
- `div.col-md-12 > div.stats-grid > div.achiv-box > div.stat-card`
- `div.stats-grid > div.achiv-box > div.ima-card > img`

<https://goc.searchchonic.online/salesforce-agentforce-services>

Problems & How to Fix

— 58/100

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.9 s

Why: The main visible content is taking 3.9 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.425

Why: Page elements are moving unexpectedly during loading (0.425). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.0 s

Why: Visible page content is appearing slowly (5.0 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 82 KiB

Why: Lighthouse reported Est savings of 82 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/technology.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/bficon2.svg>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/bficon3.svg>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/salesforce-agentforce-services-new.webp>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 400 ms

Why: Lighthouse reported Est savings of 400 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 200 ms

Why: Lighthouse reported Est savings of 200 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display]

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap

or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 31 KiB

Why: Lighthouse reported Est savings of 31 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 960 ms

Why: Lighthouse reported Est savings of 960 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.4 s

Why: Lighthouse reported 6.4 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 210 ms

Why: Lighthouse reported 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Reduce unused JavaScript

Result: Est savings of 38 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

Minimize main-thread work

Result: 8.3 s

Why: Lighthouse reported 8.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`

- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`

Avoid multiple page redirects

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.

[Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchonic.online/salesforce-agentforce-services>
- <https://goc.searchonic.online/salesforce-agentforce-services/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

<https://goc.searchonic.online/agentforce-implementation>

Problems & How to Fix

— 58/100

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.0 s

Why: The main visible content is taking 4.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.411

Why: Page elements are moving unexpectedly during loading (0.411). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.2 s

Why: Visible page content is appearing slowly (5.2 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 71 KiB

Why: Lighthouse reported Est savings of 71 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/saas-and-subscription.svg>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/infrastructure.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,170 ms

Why: Lighthouse reported Est savings of 1,170 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 190 ms

Why: Lighthouse reported Est savings of 190 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 133 KiB

Why: Lighthouse reported Est savings of 133 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `div#tab1 > div.tab-card > div.tab-icon > img`
- `li.nav-item > button.nav-link > span > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 440 ms

Why: Lighthouse reported Est savings of 440 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 5.0 s

Why: Lighthouse reported 5.0 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 390 ms

Why: Lighthouse reported 390 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 8.1 s

Why: Lighthouse reported 8.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]
(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchonic.online/agentforce-implementation>
- <https://goc.searchonic.online/agentforce-implementation/>

Reduce initial server response time

Result: Root document took 890 ms

Why: Lighthouse reported Root document took 890 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchonic.online/agentforce-implementation/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.goc-container > div.hero-wrapper > div.hero-content > p`

Problems & How to Fix

Responsive — 60/100

Horizontal overflow on Mobile

Why: The document is 387px wide while the mobile viewport is only 375px wide. This can cause horizontal scrolling, clipped content, or elements extending outside the screen. Affected elements: div (12px overflow), img (12px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow)

How to fix: Inspect the affected elements and remove fixed widths that exceed the viewport. Use responsive widths, max-width: 100%, flexible layouts, responsive images, and appropriate CSS media queries.

Horizontal overflow on Tablet

Why: The document is 780px wide while the tablet viewport is only 768px wide. This can cause horizontal scrolling, clipped content, or elements extending outside the screen. Affected elements: div (12px overflow), img (12px overflow), div (19px overflow), div (19px overflow), div (19px overflow), div (19px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow)

How to fix: Inspect the affected elements and remove fixed widths that exceed the viewport. Use responsive widths, max-width: 100%, flexible layouts, responsive images, and appropriate CSS media queries.

Horizontal overflow on Desktop

Why: The document is 1292px wide while the desktop viewport is only 1280px wide. This can cause horizontal scrolling, clipped content, or elements extending outside the screen. Affected elements: div (12px overflow), img (12px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow)

How to fix: Inspect the affected elements and remove fixed widths that exceed the viewport. Use responsive widths, max-width: 100%, flexible layouts, responsive images, and appropriate CSS media queries.

Problems & How to Fix

Performance — 75/100

Page: <https://goc.searchonic.online/>

First Contentful Paint

Result: 3.8 s

Why: The first visible content is taking 3.8 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.0 s

Why: The main visible content is taking 4.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Speed Index

Result: 5.9 s

Why: Visible page content is appearing slowly (5.9 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 136 KiB

Why: Lighthouse reported Est savings of 136 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/logo4-new.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part5.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part6.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part4.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/part2.webp>

Document request latency

Result: Est savings of 900 ms

Why: Lighthouse reported Est savings of 900 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 150 ms

Why: Lighthouse reported Est savings of 150 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Improve image delivery

Result: Est savings of 405 KiB

Why: Lighthouse reported Est savings of 405 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div#swiper-wrapper-b3d4a62f5ce28559 > div.swiper-slide > div.logo-box > img`
- `li.nav-item > button.nav-link > span > img`
- `div#tab1 > div.tab-card > div.tab-icon > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 990 ms

Why: Lighthouse reported Est savings of 990 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.7 s

Why: Lighthouse reported 6.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Reduce unused JavaScript

Result: Est savings of 23 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

Minimize main-thread work

Result: 4.9 s

Why: Lighthouse reported 4.9 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`
- `div.swiper > div#swiper-wrapper-bda3d3a005bfff110 > div.swiper-slide > img`

Reduce initial server response time

Result: Root document took 1,000 ms

Why: Lighthouse reported Root document took 1,000 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric]

(<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/>

Performance — 71/100

Page: <https://goc.searchchonic.online/about>

First Contentful Paint

Result: 2.9 s

Why: The first visible content is taking 2.9 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party

scripts.

Largest Contentful Paint

Result: 5.6 s

Why: The main visible content is taking 5.6 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Speed Index

Result: 4.8 s

Why: Visible page content is appearing slowly (4.8 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 25 KiB

Why: Lighthouse reported Est savings of 25 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/bootstrap.min.js?ver=5.3.3>

Document request latency

Result: Est savings of 440 ms

Why: Lighthouse reported Est savings of 440 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by

avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display]

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap

or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides]

(<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by

making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 1,100 ms

Why: Lighthouse reported Est savings of 1,100 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 5.6 s

Why: Lighthouse reported 5.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 5.7 s

Why: Lighthouse reported 5.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.footer-grid > div.footer-card > div.partner > img`
- `div.goc-container > div.header-container > a.logo > img`
- `div.footer-grid > div.footer-card > a.footer-logo > img`
- `div.why-col > div.why-card > div.icon > img`
- `div.why-col > div.why-card > div.icon > img`

Avoid multiple page redirects

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/about>
- <https://goc.searchchonic.online/about/>

Performance — 21/100

Page: <https://goc.searchchonic.online/revenue-cloud-implementation>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 8.5 s

Why: The main visible content is taking 8.5 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 1,310 ms

Why: The browser is spending too much time executing long JavaScript tasks (1,310 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.44

Why: Page elements are moving unexpectedly during loading (0.44). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 6.1 s

Why: Visible page content is appearing slowly (6.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 161 KiB

Why: Lighthouse reported Est savings of 161 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/salesforce-revenue-cloud-implementation-Services.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/slow-quote-to-cash-cycles-and-delayed-revenue.webp>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/fragmented-systems-with-no-single-revenue-view.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/manual-error-prone-quoting-and-billing.webp>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 440 ms

Why: Lighthouse reported Est savings of 440 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 380 ms

Why: Lighthouse reported Est savings of 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 643 KiB

Why: Lighthouse reported Est savings of 643 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.benefit-card > div.green > div.icon > img`
- `div.benefit-card > div.pink > div.icon > img`
- `div.benefit-card > div.blue > div.icon > img`
- `div.benefit-card > div.purple > div.icon > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency->

tree) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 550 ms

Why: Lighthouse reported Est savings of 550 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/footer.css?ver=1784272855>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

Time to Interactive

Result: 10.8 s

Why: Lighthouse reported 10.8 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 820 ms

Why: Lighthouse reported 820 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Minimize main-thread work

Result: 10.1 s

Why: Lighthouse reported 10.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.
[Learn how to avoid page redirects]
(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-cloud-implementation>
- <https://goc.searchchonic.online/revenue-cloud-implementation/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

Performance — 57/100

Page: <https://goc.searchchonic.online/agentforce-for-manufacturing>

First Contentful Paint

Result: 2.5 s

Why: The first visible content is taking 2.5 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.6 s

Why: The main visible content is taking 3.6 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 300 ms

Why: The browser is spending too much time executing long JavaScript tasks (300 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.438

Why: Page elements are moving unexpectedly during loading (0.438). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.1 s

Why: Visible page content is appearing slowly (5.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 69 KiB

Why: Lighthouse reported Est savings of 69 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/crm.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Operational-delays-can-reduce-productivity.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Automotive-and-Component-Manufacturing.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Industrial-Distribution.webp>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,100 ms

Why: Lighthouse reported Est savings of 1,100 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 230 ms

Why: Lighthouse reported Est savings of 230 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 38 KiB

Why: Lighthouse reported Est savings of 38 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 400 ms

Why: Lighthouse reported Est savings of 400 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.0 s

Why: Lighthouse reported 6.0 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 380 ms

Why: Lighthouse reported 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.6 s

Why: Lighthouse reported 6.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.card > div.circle-area > div.icon > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`
- `div.footer-grid > div.footer-card > div.partner > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-manufacturing>
- <https://goc.searchchonic.online/agentforce-for-manufacturing/>

Reduce initial server response time

Result: Root document took 820 ms

Why: Lighthouse reported Root document took 820 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-manufacturing/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

Performance — 59/100

Page: <https://goc.searchonic.online/agentforce-for-medical-devices>

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.5 s

Why: The main visible content is taking 4.5 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.5 s

Why: Visible page content is appearing slowly (4.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 85 KiB

Why: Lighthouse reported Est savings of 85 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/crm.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/discovery.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/agentforce-for-medical-device-solutions.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/steps.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 390 ms

Why: Lighthouse reported Est savings of 390 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 190 ms

Why: Lighthouse reported Est savings of 190 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display]

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap

or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 156 KiB

Why: Lighthouse reported Est savings of 156 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `div#tab1 > div.tab-card > div.tab-icon > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 1,250 ms

Why: Lighthouse reported Est savings of 1,250 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/swiper-bundle.min.css?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

Time to Interactive

Result: 5.4 s

Why: Lighthouse reported 5.4 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.7 s

Why: Lighthouse reported 6.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-medical-devices>
- <https://goc.searchchonic.online/agentforce-for-medical-devices/>

Avoid large layout shifts

Result: 1 layout shift found

Why: Lighthouse reported 1 layout shift found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

Affected Elements:

- `body.wp-singular > section.hero-section`

Performance — 57/100

Page: <https://goc.searchonic.online/revenue-cloud-for-manufacturing>

First Contentful Paint

Result: 2.5 s

Why: The first visible content is taking 2.5 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.2 s

Why: The main visible content is taking 3.2 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 400 ms

Why: The browser is spending too much time executing long JavaScript tasks (400 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.411

Why: Page elements are moving unexpectedly during loading (0.411). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize

fonts before rendering.

Speed Index

Result: 5.1 s

Why: Visible page content is appearing slowly (5.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 57 KiB

Why: Lighthouse reported Est savings of 57 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/infrastructure.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/goals.png>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

Max Potential First Input Delay

Result: 490 ms

Why: Lighthouse reported 490 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Avoid enormous network payloads

Result: Total size was 14,625 KiB

Why: Lighthouse reported Total size was 14,625 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Large network payloads cost users real money and are highly correlated with long load times. [Learn how to reduce payload sizes] (<https://developer.chrome.com/docs/lighthouse/performance/total-byte-weight/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/image/robotic-welding.mp4>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

Minimize main-thread work

Result: 7.9 s

Why: Lighthouse reported 7.9 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work] (<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions] (https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`

- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-cloud-for-manufacturing>
- <https://goc.searchchonic.online/revenue-cloud-for-manufacturing/>

Reduce initial server response time

Result: Root document took 640 ms

Why: Lighthouse reported Root document took 640 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-cloud-for-manufacturing/>

Avoid large layout shifts

Result: 3 layout shifts found

Why: Lighthouse reported 3 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.goc-container > div.hero-wrapper > div.hero-content > p`
- `div.hero-wrapper > div.hero-content > h1.h1-heading > span`

Performance — 69/100

Page: <https://goc.searchchonic.online/revenue-cloud-for-food-beverage>

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.0 s

Why: The main visible content is taking 3.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.41

Why: Page elements are moving unexpectedly during loading (0.41). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.6 s

Why: Visible page content is appearing slowly (4.6 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 54 KiB

Why: Lighthouse reported Est savings of 54 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]
(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/uploads/2026/07/Seasonal-demand-changes-rapidly.webp>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/efficiency.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/billing.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/automation.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 380 ms

Why: Lighthouse reported Est savings of 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 130 ms

Why: Lighthouse reported Est savings of 130 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 50 KiB

Why: Lighthouse reported Est savings of 50 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.card > div.circle-area > div.icon > img`
- `div.card > div.circle-area > div.icon > img`

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 920 ms

Why: Lighthouse reported Est savings of 920 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 4.8 s

Why: Lighthouse reported 4.8 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.card > div.circle-area > div.icon > img`
- `div.card > div.circle-area > div.icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects] (<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-cloud-for-food-beverage>
- <https://goc.searchchonic.online/revenue-cloud-for-food-beverage/>

Avoid large layout shifts

Result: 3 layout shifts found

Why: Lighthouse reported 3 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.hero-wrapper > div.hero-content > h1.h1-heading > span`
- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

Performance — 60/100

Page: <https://goc.searchchonic.online/revenue-cloud-for-martech>

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.2 s

Why: The main visible content is taking 4.2 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.438

Why: Page elements are moving unexpectedly during loading (0.438). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.4 s

Why: Visible page content is appearing slowly (4.4 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 68 KiB

Why: Lighthouse reported Est savings of 68 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Revenue-Cloud-for-Modern-Tech-Companies.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Time to Interactive

Result: 4.2 s

Why: Lighthouse reported 4.2 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Minimize main-thread work

Result: 5.3 s

Why: Lighthouse reported 5.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.card > div.circle-area > div.icon > img`
- `div.card > div.circle-area > div.icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchonic.online/revenue-cloud-for-martech>
- <https://goc.searchonic.online/revenue-cloud-for-martech/>

Reduce initial server response time

Result: Root document took 760 ms

Why: Lighthouse reported Root document took 760 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchonic.online/revenue-cloud-for-martech/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (<https://web.dev/articles/optimize-cls>)

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 31 KiB

Why: Lighthouse reported Est savings of 31 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by

making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 650 ms

Why: Lighthouse reported Est savings of 650 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.1 s

Why: Lighthouse reported 6.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 7.1 s

Why: Lighthouse reported 7.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`
- `div.footer-grid > div.footer-card > div.partner > img`
- `div.goc-container > div.header-container > a.logo > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.
[Learn how to avoid page redirects]
(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-food-beverage>
- <https://goc.searchchonic.online/agentforce-for-food-beverage/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

Performance — 68/100

Page: <https://goc.searchchonic.online/agentforce-for-martech>

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.0 s

Why: The main visible content is taking 3.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.41

Why: Page elements are moving unexpectedly during loading (0.41). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.1 s

Why: Visible page content is appearing slowly (5.1 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 50 KiB

Why: Lighthouse reported Est savings of 50 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Manual-Work-Slows-Tech-Growth.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Technology-Startups-Scale-Ups.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 910 ms

Why: Lighthouse reported Est savings of 910 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 520 ms

Why: Lighthouse reported Est savings of 520 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 4.6 s

Why: Lighthouse reported 4.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Minimize main-thread work

Result: 5.7 s

Why: Lighthouse reported 5.7 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`
- `div.footer-grid > div.footer-card > div.partner > img`
- `div.goc-container > div.header-container > a.logo > img`
- `div.footer-grid > div.footer-card > a.footer-logo > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchonic.online/agentforce-for-martech>
- <https://goc.searchonic.online/agentforce-for-martech/>

Reduce initial server response time

Result: Root document took 620 ms

Why: Lighthouse reported Root document took 620 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-for-martech/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.goc-container > div.hero-wrapper > div.hero-content > a.hero-btn`

Performance — 60/100

Page: <https://goc.searchchonic.online/revenue-cloud-for-medical>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.2 s

Why: The main visible content is taking 4.2 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.41

Why: Page elements are moving unexpectedly during loading (0.41). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.7 s

Why: Visible page content is appearing slowly (4.7 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 60 KiB

Why: Lighthouse reported Est savings of 60 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency->

tree) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 900 ms

Why: Lighthouse reported Est savings of 900 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.5 s

Why: Lighthouse reported 6.5 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 7.5 s

Why: Lighthouse reported 7.5 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.card > div.circle-area > div.icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-revenue-management>
- <https://goc.searchchonic.online/agentforce-revenue-management/>

Reduce initial server response time

Result: Root document took 840 ms

Why: Lighthouse reported Root document took 840 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchonic.online/agentforce-revenue-management/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `body.wp-singular > section.why-choose-section`

Performance — 69/100

Page: <https://goc.searchonic.online/subscription-billing-management>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 2.9 s

Why: The main visible content is taking 2.9 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.435

Why: Page elements are moving unexpectedly during loading (0.435). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.5 s

Why: Visible page content is appearing slowly (4.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 46 KiB

Why: Lighthouse reported Est savings of 46 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Turn-every-subscription-cycle-into-predictable-revenue.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/automation.png>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/inflation-rate.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,150 ms

Why: Lighthouse reported Est savings of 1,150 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 210 ms

Why: Lighthouse reported Est savings of 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 69 KiB

Why: Lighthouse reported Est savings of 69 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 1,000 ms

Why: Lighthouse reported Est savings of 1,000 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/footer.css?ver=1784272855>

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.1 s

Why: Lighthouse reported 6.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects] (<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/subscription-billing-management>
- <https://goc.searchchonic.online/subscription-billing-management/>

Reduce initial server response time

Result: Root document took 770 ms

Why: Lighthouse reported Root document took 770 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/subscription-billing-management/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

Performance — 68/100

Page: <https://goc.searchchonic.online/usage-based-billing>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.0 s

Why: The main visible content is taking 3.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.9 s

Why: Visible page content is appearing slowly (4.9 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 53 KiB

Why: Lighthouse reported Est savings of 53 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Automate-every-usage-billing-cycle.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

Performance — 67/100

Page: <https://goc.searchchonic.online/cpq-billing-integration>

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.2 s

Why: The main visible content is taking 3.2 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.0 s

Why: Visible page content is appearing slowly (5.0 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 56 KiB

Why: Lighthouse reported Est savings of 56 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Improve image delivery

Result: Est savings of 36 KiB

Why: Lighthouse reported Est savings of 36 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 690 ms

Why: Lighthouse reported Est savings of 690 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.3 s

Why: Lighthouse reported 6.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/cpq-billing-integration>
- <https://goc.searchchonic.online/cpq-billing-integration/>

Reduce initial server response time

Result: Root document took 830 ms

Why: Lighthouse reported Root document took 830 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/cpq-billing-integration/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.hero-content > nav > ol.breadcrumb > li.breadcrumb-item`

Performance — 60/100

Page: <https://goc.searchonic.online/revenue-recognition-automation>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.3 s

Why: The main visible content is taking 4.3 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.409

Why: Page elements are moving unexpectedly during loading (0.409). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 4.5 s

Why: Visible page content is appearing slowly (4.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 57 KiB

Why: Lighthouse reported Est savings of 57 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/saas-and-subscription.svg>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Stop-delaying-your-financial-close-with-manual-workflows.webp>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/efficiency.png>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,050 ms

Why: Lighthouse reported Est savings of 1,050 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 160 ms

Why: Lighthouse reported Est savings of 160 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display]

(<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to

mitigate layout shifts with [font metric overrides]
(<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>

Improve image delivery

Result: Est savings of 17 KiB

Why: Lighthouse reported Est savings of 17 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]
(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies]
(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).
Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]
(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]
(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

Time to Interactive

Result: 4.3 s

Why: Lighthouse reported 4.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 6.6 s

Why: Lighthouse reported 6.6 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.usecase-item > div.usecase-box > span.ins-icon > img`
- `div.goc-container > div.integration-wrap > div.integration-card > img`

Avoid multiple page redirects

Result: Est savings of 1,020 ms

Why: Lighthouse reported Est savings of 1,020 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-recognition-automation>
- <https://goc.searchchonic.online/revenue-recognition-automation/>

Reduce initial server response time

Result: Root document took 760 ms

Why: Lighthouse reported Root document took 760 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/revenue-recognition-automation/>

Avoid large layout shifts

Result: 1 layout shift found

Why: Lighthouse reported 1 layout shift found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`

Performance — 75/100

Page: <https://goc.searchchonic.online/contact-us>

First Contentful Paint

Result: 2.6 s

Why: The first visible content is taking 2.6 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 2.7 s

Why: The main visible content is taking 2.7 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Total Blocking Time

Result: 320 ms

Why: The browser is spending too much time executing long JavaScript tasks (320 ms). This delays user interaction.

How to fix: Reduce JavaScript execution, remove unused JavaScript, split large bundles, defer non-critical scripts, and reduce third-party JavaScript.

Cumulative Layout Shift

Result: 0.147

Why: Page elements are moving unexpectedly during loading (0.147). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.5 s

Why: Visible page content is appearing slowly (5.5 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 65 KiB

Why: Lighthouse reported Est savings of 65 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/flag-india.svg>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/flag-usa.svg>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/flag-uae.svg>

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 54 KiB

Why: Lighthouse reported Est savings of 54 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency->

tree) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 900 ms

Why: Lighthouse reported Est savings of 900 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/footer.css?ver=1784272855>

Time to Interactive

Result: 5.4 s

Why: Lighthouse reported 5.4 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 380 ms

Why: Lighthouse reported 380 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 30 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 8.8 s

Why: Lighthouse reported 8.8 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`
- `div.stats-grid > div.achiv-box > div.ima-card > img`

Avoid multiple page redirects

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded.

[Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/contact-us>
- <https://goc.searchchonic.online/contact-us/>

Avoid large layout shifts

Result: 3 layout shifts found

Why: Lighthouse reported 3 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.contact-revenue-stats`
- `div.col-md-12 > div.stats-grid > div.achiv-box > div.stat-card`
- `div.stats-grid > div.achiv-box > div.ima-card > img`

Performance — 58/100

Page: <https://goc.searchchonic.online/salesforce-agentforce-services>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 3.9 s

Why: The main visible content is taking 3.9 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.425

Why: Page elements are moving unexpectedly during loading (0.425). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.0 s

Why: Visible page content is appearing slowly (5.0 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 82 KiB

Why: Lighthouse reported Est savings of 82 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]

(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/uploads/2026/07/technology.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 400 ms

Why: Lighthouse reported Est savings of 400 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 200 ms

Why: Lighthouse reported Est savings of 200 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Improve image delivery

Result: Est savings of 31 KiB

Why: Lighthouse reported Est savings of 31 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`
- `div.goc-container > div.timeline > div.timeline-item > div.circle`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP]

(<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 960 ms

Why: Lighthouse reported Est savings of 960 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 6.4 s

Why: Lighthouse reported 6.4 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 210 ms

Why: Lighthouse reported 210 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 18 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>

Reduce unused JavaScript

Result: Est savings of 38 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://goc.searchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>

Minimize main-thread work

Result: 8.3 s

Why: Lighthouse reported 8.3 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to

minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`
- `div.usecase-item > div.usecase-box > span.ins-con > img`

Avoid multiple page redirects

Result: Est savings of 1,030 ms

Why: Lighthouse reported Est savings of 1,030 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/salesforce-agentforce-services>
- <https://goc.searchchonic.online/salesforce-agentforce-services/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `section.hero-section > div.goc-container > div.hero-wrapper > div.hero-image`

Performance — 58/100

Page: <https://goc.searchchonic.online/agentforce-implementation>

First Contentful Paint

Result: 2.7 s

Why: The first visible content is taking 2.7 s to appear. This can make the page feel slow when users first open it.

How to fix: Reduce render-blocking CSS and JavaScript, optimize above-the-fold images, preload important resources, and remove unnecessary third-party scripts.

Largest Contentful Paint

Result: 4.0 s

Why: The main visible content is taking 4.0 s to appear. A slow Largest Contentful Paint usually means the main image, heading, or other large element is loading too late.

How to fix: Optimize the main hero image, use WebP or AVIF, preload the LCP resource when appropriate, reduce render-blocking resources, and defer non-critical JavaScript.

Cumulative Layout Shift

Result: 0.411

Why: Page elements are moving unexpectedly during loading (0.411). This can make the page difficult to use and can cause accidental clicks.

How to fix: Reserve space for images and advertisements, define width and height for media, avoid inserting content above existing content, and stabilize fonts before rendering.

Speed Index

Result: 5.2 s

Why: Visible page content is appearing slowly (5.2 s), so users may see an incomplete page for longer.

How to fix: Optimize above-the-fold images, reduce render-blocking resources, inline critical CSS, and defer non-critical assets.

Use efficient cache lifetimes

Result: Est savings of 71 KiB

Why: Lighthouse reported Est savings of 71 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching]
(<https://developer.chrome.com/docs/performance/insights/cache>).

Affected Elements:

- <https://goc.searchonic.online/wp-content/uploads/2026/07/saas-and-subscription.svg>

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/js/vendor/swiper-bundle.min.js?ver=11.0.0>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/infrastructure.png>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/Manual-Support-Slows-Growth.webp>
- <https://goc.searchchonic.online/wp-content/uploads/2026/07/goals.png>

Layout shift culprits

Why: Lighthouse identified an issue with this page.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts]

(<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Document request latency

Result: Est savings of 1,170 ms

Why: Lighthouse reported Est savings of 1,170 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Your first network request is the most important. [Reduce its latency] (<https://developer.chrome.com/docs/performance/insights/document-latency>) by avoiding redirects, ensuring a fast server response, and enabling text compression.

Font display

Result: Est savings of 190 ms

Why: Lighthouse reported Est savings of 190 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider setting [font-display] (<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides] (<https://developer.chrome.com/blog/font-fallbacks>).

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-solid-900.woff2>
- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/webfonts/fa-regular-400.woff2>

Forced reflow

Why: Lighthouse identified an issue with this page.

How to fix: A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows]

(<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

Improve image delivery

Result: Est savings of 133 KiB

Why: Lighthouse reported Est savings of 133 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Affected Elements:

- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `div#tab1 > div.tab-card > div.tab-icon > img`
- `li.nav-item > button.nav-link > span > img`

LCP breakdown

Why: Lighthouse identified an issue with this page.

How to fix: Each [subpart has specific improvement strategies] (<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

LCP request discovery

Why: Lighthouse identified an issue with this page.

How to fix: [Optimize LCP] (<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Network dependency tree

Why: Lighthouse identified an issue with this page.

How to fix: [Avoid chaining critical requests] (<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests

Result: Est savings of 440 ms

Why: Lighthouse reported Est savings of 440 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining]

(<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Affected Elements:

- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery.min.js?ver=3.7.1>
- <https://goc.searchchonic.online/wp-includes/js/jquery/jquery-migrate.min.js?ver=3.4.1>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/style.css?ver=1.0.0>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/blog.css?ver=1784795964>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/nav.css?ver=1784246300>

Time to Interactive

Result: 5.0 s

Why: Lighthouse reported 5.0 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 390 ms

Why: Lighthouse reported 390 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Minify CSS

Result: Est savings of 5 KiB

Why: Lighthouse reported Est savings of 5 KiB for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Affected Elements:

- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/style.css?ver=1786701773>

Reduce unused CSS

Result: Est savings of 29 KiB

Why: The page is downloading resources that are not fully used during the initial page load. This increases network and processing work.

How to fix: Remove unused code, split CSS and JavaScript by page or feature, defer non-critical resources, and load assets only when they are needed.

Affected Elements:

- <https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.7.2/css/all.min.css?ver=6.7.2>
- <https://goc.searchchonic.online/wp-content/themes/getoncrm/assets/css/vendor/bootstrap.min.css?ver=5.3.3>

Minimize main-thread work

Result: 8.1 s

Why: Lighthouse reported 8.1 s for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(<https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/>)

Image elements do not have explicit `width` and `height`

Why: Lighthouse identified an issue with this page.

How to fix: Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions]

(https://web.dev/articles/optimize-cls#images_without_dimensions)

Affected Elements:

- `div.goc-container > div.hero-wrapper > div.hero-image > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`
- `li.nav-item > button.nav-link > span > img`

Avoid multiple page redirects

Result: Est savings of 1,010 ms

Why: Lighthouse reported Est savings of 1,010 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Redirects introduce additional delays before the page can be loaded. [Learn how to avoid page redirects]

(<https://developer.chrome.com/docs/lighthouse/performance/redirects/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-implementation>
- <https://goc.searchchonic.online/agentforce-implementation/>

Reduce initial server response time

Result: Root document took 890 ms

Why: Lighthouse reported Root document took 890 ms for this audit, indicating that this check did not meet the recommended threshold.

How to fix: Keep the server response time for the main document short because all other requests depend on it. [Learn more about the Time to First Byte metric] (<https://developer.chrome.com/docs/lighthouse/performance/time-to-first-byte/>).

Affected Elements:

- <https://goc.searchchonic.online/agentforce-implementation/>

Avoid large layout shifts

Result: 2 layout shifts found

Why: Lighthouse reported 2 layout shifts found for this audit, indicating that this check did not meet the recommended threshold.

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing] (https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS] (<https://web.dev/articles/optimize-cls>)

Affected Elements:

- `body.wp-singular > section.hero-section`
- `div.goc-container > div.hero-wrapper > div.hero-content > p`

Responsive — 60/100

Page: <https://goc.searchchonic.online/quote-to-cash-automation>

Horizontal overflow on Mobile

Why: The document is 387px wide while the mobile viewport is only 375px wide. This can cause horizontal scrolling, clipped content, or elements extending outside the screen. Affected elements: `div` (12px overflow), `img` (12px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow)

How to fix: Inspect the affected elements and remove fixed widths that exceed the viewport. Use responsive widths, `max-width: 100%`, flexible layouts, responsive images, and appropriate CSS media queries.

Horizontal overflow on Tablet

Why: The document is 780px wide while the tablet viewport is only 768px wide. This can cause horizontal scrolling, clipped content, or elements extending outside the screen. Affected elements: `div` (12px overflow), `img` (12px overflow), `div` (19px overflow), `div` (19px overflow), `div` (19px overflow), `div` (19px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow), `div` (20px overflow)

How to fix: Inspect the affected elements and remove fixed widths that exceed the viewport. Use responsive widths, max-width: 100%, flexible layouts, responsive images, and appropriate CSS media queries.

Horizontal overflow on Desktop

Why: The document is 1292px wide while the desktop viewport is only 1280px wide. This can cause horizontal scrolling, clipped content, or elements extending outside the screen. Affected elements: div (12px overflow), img (12px overflow), div (20px overflow), div (20px overflow), div (20px overflow), div (20px overflow)

How to fix: Inspect the affected elements and remove fixed widths that exceed the viewport. Use responsive widths, max-width: 100%, flexible layouts, responsive images, and appropriate CSS media queries.

UI / UX Analysis

<https://goc.searchonic.online/>

UI-001

Severity: Medium

Issue: Low contrast on supporting body copy

Why: The gray body paragraph text beneath the main headline provides low visual contrast against the pale cyan background.

Recommendation: Darken the body text color to a deeper slate/charcoal (#1e293b or darker) to ensure compliance with WCAG AA contrast standards.

 Annotated UI/UX issue screenshot

UI-002

Severity: Low

Issue: Unanchored floating partner logo

Why: The Salesforce cloud logo floats above the imagery without a partnership label, badge container, or context.

Recommendation: Place the Salesforce logo inside a dedicated partner badge or accreditation lockup (e.g., 'Certified Salesforce Partner') to establish clear trust credentials.

Annotated UI/UX issue screenshot

UI-003

Severity: Low

Issue: Competing CTA button styles

Why: The header CTA ('Let's Talk') and the hero primary CTA ('Book a Free Consultation') share the exact same blue background styling, diluting the hierarchy of the main conversion path.

Recommendation: Style the navigation CTA as an outline/secondary button to ensure the hero CTA remains the distinct primary focal point.

Annotated UI/UX issue screenshot

<https://goc.searchonic.online/about>

UI-101

Severity: High

Issue: Poor button contrast on dark blue hero

Why: The purple-blue 'Connect Now' CTA button blends directly into the saturated blue background banner, failing visual pop and contrast requirements.

Recommendation: Use a high-contrast accent color (such as white with dark text or a bright accent color) to make the primary button easily distinguishable on dark backgrounds.

 Annotated UI/UX issue screenshot

UI-102

Severity: Medium

Issue: Misaligned page intent and CTA messaging

Why: The 'About Us' hero banner leads directly with a sales pitch ('Connect with us to implement Salesforce solutions') and a conversion button ('Connect Now') rather than establishing company background, mission, or identity.

Recommendation: Structure the About page hero to highlight company vision, team expertise, and credibility before introducing direct contact actions.

 Annotated UI/UX issue screenshot

UI-103

Severity: Low

Issue: Hard visual background separation

Why: The dark solid blue hero section abruptly transitions into a pale lilac/white section without visual transition or cohesive section framing.

Recommendation: Introduce softer section dividers, subtle gradients, or consistent background tonality aligned with the rest of the site.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/revenue-cloud-implementation>

UI-201

Severity: High

Issue: Gibberish and placeholder UI text in visual graphics

Why: The floating analytics cards contain nonsensical dummy labels ('Tolis Revenue', 'This Guster', 'Bodee', 'Aotieilies by Status'), degrading professional trust and authenticity.

Recommendation: Replace dummy graphic text with realistic B2B revenue metrics (e.g., 'Total Revenue', 'This Quarter', 'Activities by Status', 'Pipeline Stage').

 Annotated UI/UX issue screenshot

UI-202

Severity: Medium

Issue: Excessively long CTA label text

Why: The button label 'Start Your Revenue Cloud Implementation' is overly wordy, creating a wide button that hurts readability and scan speed.

Recommendation: Shorten the CTA copy to concise, action-oriented text such as 'Get Started' or 'Implement Revenue Cloud'.

 Annotated UI/UX issue screenshot

UI-203

Severity: Low

Issue: Low contrast breadcrumb link text

Why: The teal/blue link text in the breadcrumb path provides weak contrast against the light cyan hero background.

Recommendation: Darken breadcrumb links to a higher-contrast blue or charcoal tone to meet WCAG AA legibility standards.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/agentforce-for-manufacturing>

UI-301

Severity: Medium

Issue: Overly verbose primary CTA button text

Why: The CTA text 'Start Your Agentforce for Manufacturing Journey' is too long for standard button scanning and interaction design.

Recommendation: Simplify the button label to 'Get Started with Agentforce' or 'Request a Consultation'.

 Annotated UI/UX issue screenshot

UI-302

Severity: Medium

Issue: Visual asset style inconsistency across site

Why: This page utilizes fully 3D stylized cartoon figures and graphics, which directly clashes with the real human photography used on the Homepage, About, and Revenue Cloud pages.

Recommendation: Adopt a unified imagery system across all pages—either consistent photography or consistent 3D/illustrated styles—to maintain cohesive brand identity.

 Annotated UI/UX issue screenshot

UI-303

Severity: Low

Issue: Weak breadcrumb text contrast

Why: The light blue breadcrumb trail text ('Home / Industry / Agentforce for Manufacturing') does not provide sufficient contrast on top of the pale aqua background.

Recommendation: Increase font weight or use a darker slate tone for breadcrumb links to ensure effortless legibility.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/agentforce-for-medical-devices>

UI-001

Severity: Medium

Issue: Excessively verbose CTA button label

Why: The primary CTA text 'Start Your Agentforce for Medical Devices Journey' is too long, reducing quick scannability and visual impact.

Recommendation: Shorten the CTA label to concise, action-oriented text such as 'Get Started' or 'Explore Agentforce'.

 Annotated UI/UX issue screenshot

UI-002

Severity: Low

Issue: Low contrast in breadcrumb navigation links

Why: The cyan/teal link color in the breadcrumb navigation has suboptimal contrast against the pale light blue hero background.

Recommendation: Increase text color darkness for breadcrumbs to satisfy WCAG AA contrast standards.

 Annotated UI/UX issue screenshot

UI-003

Severity: Low

Issue: Lack of visible trust signals in hero area

Why: The visible viewport lacks social proof, certifications, or partner badges to immediately build credibility for enterprise buyers.

Recommendation: Add a row of client logos, Salesforce partner badges, or customer review ratings below the CTA.

<https://goc.searchonic.online/revenue-cloud-for-manufacturing>

UI-004

Severity: Medium

Issue: Overly long CTA button copy

Why: The button label 'Start Your Revenue Cloud for Manufacturing Journey' is lengthy, creating an unnecessarily wide button.

Recommendation: Simplify button text to 'Get Started' or 'Explore Revenue Cloud'.

 Annotated UI/UX issue screenshot

UI-005

Severity: Low

Issue: Low contrast breadcrumb link text

Why: The blue link text in the breadcrumbs blends into the light cyan/mint background.

Recommendation: Use a darker navy or neutral shade to enhance readability and meet accessibility guidelines.

 Annotated UI/UX issue screenshot

UI-006

Severity: Low

Issue: Hero visual lacks supporting graphic depth

Why: Compared to other pages with contextual 3D diagrams, the single stock cutout looks relatively plain and lacks workflow illustration.

Recommendation: Incorporate relevant UI graphics, manufacturing metrics, or workflow iconography alongside the hero image.

Annotated UI/UX issue screenshot

<https://goc.searchonic.online/revenue-cloud-for-food-beverage>

UI-007

Severity: High

Issue: Missing descriptive subheadline / body copy

Why: The hero section skips supporting body copy completely, transitioning directly from the headline to the CTA button, reducing context and value proposition clarity.

Recommendation: Add a 2-3 line explanatory paragraph between the headline and CTA explaining how Revenue Cloud solves food & beverage challenges.

UI-008

Severity: Medium

Issue: Overly verbose CTA button text

Why: The CTA text 'Start Your Revenue Cloud for Food & Beverage Journey' contains excessive words.

Recommendation: Shorten the CTA label to 'Get Started' or 'Request a Demo'.

 Annotated UI/UX issue screenshot

UI-009

Severity: Low

Issue: Low contrast breadcrumbs

Why: The breadcrumb links have weak contrast against the soft cyan background.

Recommendation: Darken the breadcrumb text color to ensure sufficient contrast ratios.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/revenue-cloud-for-martech>

UI-010

Severity: Critical

Issue: Placeholder / unedited copy visible in headline

Why: The headline contains the unfinished placeholder text 'How Revenue Cloud Models Content To Be Changed', creating a severe quality issue in production.

Recommendation: Replace the placeholder copy with polished, finalized benefit-driven headline copy.

 Annotated UI/UX issue screenshot

UI-011

Severity: High

Issue: Inconsistent naming and terminology across hero elements

Why: The breadcrumb refers to 'MarTech', while the headline and CTA button refer to 'Modern Tech', causing branding and messaging inconsistency.

Recommendation: Align terminology consistently across the breadcrumb, headline, and CTA (either 'MarTech' or 'Modern Tech').

 Annotated UI/UX issue screenshot

UI-012

Severity: High

Issue: Missing supporting value proposition paragraph

Why: There is no descriptive body text explaining the solution between the headline and the CTA.

Recommendation: Insert supporting body copy explaining key benefits for modern tech companies.

UI-013

Severity: Medium

Issue: Lengthy CTA button label

Why: The CTA text 'Start Your Revenue Cloud for Modern Tech Journey' is too wordy.

Recommendation: Condense the CTA copy to 'Get Started' or 'Talk to an Expert'.

 Annotated UI/UX issue screenshot

UI-014

Severity: Low

Issue: Low contrast breadcrumb link styling

Why: Breadcrumb links are styled in a light cyan/blue shade that lacks sufficient contrast against the hero background.

Recommendation: Darken the link color to improve text accessibility.

 Annotated UI/UX issue screenshot

UI-001

Severity: Medium

Issue: Excessively long CTA button text

Why: The primary CTA button contains a six-word phrase ('Start Your Revenue Recognition Automation') which creates an unusually wide button and reduces quick scannability.

Recommendation: Shorten the CTA copy to a concise action phrase such as 'Get Started' or 'Automate Revenue Now'.

Annotated UI/UX issue screenshot

UI-002

Severity: Low

Issue: Awkward breadcrumb text wrapping

Why: The breadcrumb navigation breaks into two lines ('/ Revenue Recognition Automation' on line two) with uneven indenting relative to the top line.

Recommendation: Adjust font size, line-height, or layout width to ensure breadcrumbs render seamlessly on a single line or wrap cleanly.

Annotated UI/UX issue screenshot

UI-003

Severity: Medium

Issue: Missing supporting body description

Why: Unlike standard landing page hero sections, there is no explanatory body paragraph between the heading and the CTA button, jumping abruptly from title to action.

Recommendation: Add a brief 1-2 sentence supporting paragraph to provide context before the call to action.

 Annotated UI/UX issue screenshot

UI-004

Severity: Low

Issue: Mixed headline typography treatments

Why: The headline splits into two distinct styles: black bold roman text followed by italicized purple/blue text, creating slight visual competition.

Recommendation: Maintain consistent font-style formatting or restrict color emphasis to key keywords rather than two full sentences.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/contact-us>

UI-005

Severity: High

Issue: Missing persistent form labels

Why: Input fields rely entirely on inner placeholder text rather than persistent top or floating labels, which causes usability and accessibility issues once users begin typing.

Recommendation: Add visible top labels above each form field or implement accessible floating labels.

UI-006

Severity: Medium

Issue: Form submit button cut off from viewport

Why: The form card cuts off below 'Phone Number', leaving the submit action below the fold in standard viewport heights.

Recommendation: Reduce vertical padding between form elements and adjust card spacing so the submit CTA is immediately visible above the fold.

UI-007

Severity: Low

Issue: Repetitive copy in trust badges

Why: The descriptions directly duplicate the heading copy (e.g., '10+ Years of Expertise' followed by 'Years of Salesforce expertise...').

Recommendation: Revise the subtext to add complementary details (e.g., specific outcomes, client satisfaction rates) rather than repeating the title words.

 Annotated UI/UX issue screenshot

UI-008

Severity: Low

Issue: Abrupt horizontal divider styling

Why: The thin blue horizontal divider lines under the trust metric cards terminate abruptly without aligning fully to the text grid width.

Recommendation: Standardize divider width, replace with subtle card background separation, or align dividers to full column bounds.

<https://goc.searchonic.online/salesforce-agentforce-services>

UI-009

Severity: Medium

Issue: Low color contrast on secondary headline emphasis

Why: The purple/blue italic text ('Agentforce Keeps Every Conversation Moving.') on the light mint background has reduced contrast compared to the primary black header text.

Recommendation: Darken the blue/purple accent tone to meet WCAG AA contrast standards (minimum 4.5:1 ratio).

 Annotated UI/UX issue screenshot

UI-010

Severity: Medium

Issue: Verbose CTA button label

Why: The CTA text 'Start Your Salesforce Agentforce Journey' is lengthy and requires higher cognitive processing than standard concise CTA conventions.

Recommendation: Simplify button text to 'Get Started with Agentforce' or 'Explore Agentforce'.

 Annotated UI/UX issue screenshot

UI-011

Severity: Low

Issue: Light body copy contrast

Why: The supporting paragraph text is rendered in a medium grey tone which reduces readability against the light blue-green background.

Recommendation: Increase text color darkness to #1E293B or similar high-contrast slate tone.

 Annotated UI/UX issue screenshot

UI-012

Severity: Low

Issue: Missing active navigation indicator

Why: The top navigation bar provides no visual indicator (underline, bold weight, or color shift) to denote that the user is under the 'Services' section.

Recommendation: Add an active state indicator to the 'Services' menu item matching the primary brand color.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/agentforce-implementation>

UI-013

Severity: Medium

Issue: Overly long CTA label

Why: The button text 'Start Your Agentforce Implementation Journey' spans 44 characters, which can wrap awkwardly on smaller mobile screen viewports.

Recommendation: Shorten to 'Start Implementation' or 'Schedule a Consultation'.

 Annotated UI/UX issue screenshot

UI-014

Severity: Medium

Issue: Low text contrast on supporting paragraph

Why: The hero description paragraph uses a muted grey font that creates suboptimal contrast against the pale mint background.

Recommendation: Use a darker font color (such as #0F172A) to improve legibility and meet accessibility guidelines.

 Annotated UI/UX issue screenshot

UI-015

Severity: Low

Issue: Visual clutter in right hero illustration

Why: The 3D illustration contains multiple competing visual metaphors (paper stacks, floating mail envelopes, hourglass, monitor, robot, gear, plant) which increases cognitive load.

Recommendation: Streamline the visual elements in the illustration to focus primarily on the core transition from manual workload to automated agent.

 Annotated UI/UX issue screenshot

UI-016

Severity: Low

Issue: Lack of visual active state on main navigation

Why: The header navigation does not visually highlight 'Services' despite the breadcrumb confirming the user is within a sub-service route.

Recommendation: Highlight 'Services' in the navigation bar with an active pill or primary accent color to maintain user orientation.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/salesforce-revenue-cloud-services>

UI-001

Severity: Medium

Issue: Missing supporting description copy in hero section

Why: The hero section contains a large heading and a CTA button, but lacks supporting body text to elaborate on the offering before prompting action.

Recommendation: Add a 1-2 sentence supporting paragraph between the heading and the primary CTA button to provide context and value proposition.

 Annotated UI/UX issue screenshot

UI-002

Severity: Low

Issue: Overly verbose primary CTA button label

Why: The CTA text 'Start Your Salesforce Revenue Cloud Journey' is excessively long, reducing scannability and visual punch.

Recommendation: Shorten the CTA copy to 'Get Started' or 'Explore Revenue Cloud Services'.

 Annotated UI/UX issue screenshot

UI-003

Severity: Medium

Issue: Low color contrast on breadcrumb links

Why: The light blue link color in the breadcrumb navigation against the pale mint background presents weak contrast, hindering readability.

Recommendation: Darken the blue breadcrumb link color to meet WCAG AA contrast compliance (at least 4.5:1 ratio).

 Annotated UI/UX issue screenshot

UI-004

Severity: Low

Issue: Absence of visible trust badges or proof points

Why: The hero viewport contains no partner badges (such as Salesforce Partner status), client logos, or ratings to build credibility.

Recommendation: Place official partner badges or concise social proof indicators beneath the CTA button.

 Annotated UI/UX issue screenshot

<https://goc.searchonic.online/quote-to-cash-automation>

UI-001

Severity: High

Issue: Content and context mismatch in hero copy

Why: The heading focuses on Quote-to-Cash Automation, but the supporting paragraph refers to 'Agentforce' and support teams, creating confusing messaging dissonance.

Recommendation: Update the paragraph text to describe Quote-to-Cash automation benefits (e.g., billing, invoicing, contracting) rather than support team features.

 Annotated UI/UX issue screenshot

UI-002

Severity: Low

Issue: Overly long CTA button copy

Why: The CTA text 'Start Your Quote-to-Cash Automation Journey' is long and creates a wide button that may wrap awkwardly on smaller viewports.

Recommendation: Condense the CTA label to 'Automate Quote-to-Cash' or 'Schedule a Demo'.

 Annotated UI/UX issue screenshot

UI-003

Severity: Medium

Issue: Weak breadcrumb text contrast

Why: The light blue link text for 'Home' and 'Revenue Cloud Solutions' on the light cyan background does not provide optimal readability.

Recommendation: Use a darker blue or neutral charcoal tone for breadcrumb links to ensure strong contrast against the light background.

 Annotated UI/UX issue screenshot

UI-004

Severity: Low

Issue: Lack of conversion trust signals

Why: The visible viewport lacks social proof, customer logos, or certifications to reinforce trust before the fold.

Recommendation: Add customer logos or key performance metrics (e.g., '% cycle time reduction') beneath the CTA button.
