Management Summary

1

Page elements move around unexpectedly while loading, which can cause visitors to click the wrong buttons or links.

Page

Found on **12** pages

► [View affected pages](#)

How to Fix

Reserve fixed space for images, banners, and dynamic content so text and buttons remain stable as the page loads.

2

Images do not have fixed size dimensions set, causing the page layout to shift while loading.

Page

Found on **46** pages

► [View affected pages](#)

How to Fix

Add explicit width and height values to all image tags so space is properly reserved before they load.

3

Images are stretched or distorted because their display size does not match their original image proportions.

Page

Found on **11** pages

► [View affected pages](#)

How to Fix

Update image styling and container settings to ensure images display using their natural proportions.

4

Pages take too long to start showing initial text or content when opened by visitors.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Optimize initial page loading by compressing assets and removing unnecessary scripts blocking the display.

5

The main visual section or top banner takes too long to appear when opening pages.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Optimize main hero images and prioritize loading key page elements before secondary background resources.

6

Pages briefly freeze or become unresponsive when users attempt to click or interact with them.

Page

Found on 12 pages

► [View affected pages](#)

How to Fix

Reduce heavy background scripts and split complex code so the browser can respond quickly to user clicks.

7

Non-essential background files are delaying the initial visual loading of the pages.

Page

Found on 29 pages

► [View affected pages](#)

How to Fix

Defer non-critical scripts and styling files so they load after the main visible content is displayed.

8

The search engine configuration file (robots.txt) is invalid, which may prevent search engines from scanning pages correctly.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Fix and properly format the robots.txt file so search engines can crawl important site pages without errors.

9

Several pages are missing a text description summary, which lowers search engine visibility.

Page

Found on **12** pages

► [View affected pages](#)

How to Fix

Add unique description summaries to these pages so search engines can display helpful snippets in search results.

10

Some page text is difficult to read because the font color does not contrast enough with the background color.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Adjust text or background colors to create higher contrast and improve readability for all users.

11

Clickable buttons do not have descriptive text, making their function unclear to visitors using screen readers.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Add visible button labels or hidden descriptive labels to every button element.

12

Certain links do not have clear descriptive text explaining where they direct visitors.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Replace vague link text with clear, descriptive phrasing that explains the destination.

13

Page headings skip levels instead of following a logical structure, making content navigation confusing.

Page

Found on **50** pages

► [View affected pages](#)

How to Fix

Reorganize headings sequentially without skipping levels so the structure is easy to follow.

14

The link to the company's Facebook page is broken and cannot be accessed.

Page

Found on **49** pages

► [View affected pages](#)

How to Fix

Update the Facebook URL to point to the correct live social profile.

15

The Twitter share button link on several articles and pages is broken.

Page

Found on **8** pages

► [View affected pages](#)

How to Fix

Fix or replace the Twitter share link destination so visitors can share content successfully.
