Problems & How to Fix

Performance — 15/100

First Contentful Paint

Result: 2.6 s

Why: First Contentful Paint marks the time at which the first text or image is painted. [Learn more about the First Contentful Paint metric]

(<https://developer.chrome.com/docs/lighthouse/performance/first-contentful-paint/>).

How to fix: First Contentful Paint marks the time at which the first text or image is painted. [Learn more about the First Contentful Paint metric]

(<https://developer.chrome.com/docs/lighthouse/performance/first-contentful-paint/>).

Largest Contentful Paint

Result: 14.8 s

Why: Largest Contentful Paint marks the time at which the largest text or image is painted. [Learn more about the Largest Contentful Paint metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-largest-contentful-paint/>)

How to fix: Largest Contentful Paint marks the time at which the largest text or image is painted. [Learn more about the Largest Contentful Paint metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-largest-contentful-paint/>)

Total Blocking Time

Result: 3,440 ms

Why: Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds. [Learn more about the Total Blocking Time metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-total-blocking-time/>).

How to fix: Sum of all time periods between FCP and Time to Interactive, when task length exceeded 50ms, expressed in milliseconds. [Learn more about the

Total Blocking Time metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-total-blocking-time/>).

Cumulative Layout Shift

Result: 0.65

Why: Cumulative Layout Shift measures the movement of visible elements within the viewport. [Learn more about the Cumulative Layout Shift metric] (<https://web.dev/articles/cls>).

How to fix: Cumulative Layout Shift measures the movement of visible elements within the viewport. [Learn more about the Cumulative Layout Shift metric] (<https://web.dev/articles/cls>).

Speed Index

Result: 5.2 s

Why: Speed Index shows how quickly the contents of a page are visibly populated. [Learn more about the Speed Index metric] (<https://developer.chrome.com/docs/lighthouse/performance/speed-index/>).

How to fix: Speed Index shows how quickly the contents of a page are visibly populated. [Learn more about the Speed Index metric] (<https://developer.chrome.com/docs/lighthouse/performance/speed-index/>).

Use efficient cache lifetimes

Result: Est savings of 17 KiB

Why: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching](<https://developer.chrome.com/docs/performance/insights/cache>).

How to fix: A long cache lifetime can speed up repeat visits to your page. [Learn more about caching] (<https://developer.chrome.com/docs/performance/insights/cache>).

Layout shift culprits

Why: Layout shifts occur when elements move absent any user interaction.

[Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

How to fix: Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

Duplicated JavaScript

Result: Est savings of 27 KiB

Why: Remove large, [duplicate JavaScript modules] (<https://developer.chrome.com/docs/performance/insights/duplicated-javascript>)

from bundles to reduce unnecessary bytes consumed by network activity.

How to fix: Remove large, [duplicate JavaScript modules]

(<https://developer.chrome.com/docs/performance/insights/duplicated-javascript>)

from bundles to reduce unnecessary bytes consumed by network activity.

Improve image delivery

Result: Est savings of 86 KiB

Why: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

How to fix: Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size]

(<https://developer.chrome.com/docs/performance/insights/image-delivery>)

LCP breakdown

Why: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

How to fix: Each [subpart has specific improvement strategies]

(<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>).

Ideally, most of the LCP time should be spent on loading the resources, not within delays.

Legacy JavaScript

Result: Est savings of 39 KiB

Why: Polyfills and transforms enable older browsers to use new JavaScript features. However, many aren't necessary for modern browsers. Consider modifying your JavaScript build process to not transpile [Baseline]

(<https://web.dev/articles/baseline-and-polyfills>) features, unless you know you must support older browsers. [Learn why most sites can deploy ES6+ code without transpiling]

(<https://developer.chrome.com/docs/performance/insights/legacy-javascript>)

How to fix: Polyfills and transforms enable older browsers to use new JavaScript features. However, many aren't necessary for modern browsers. Consider modifying your JavaScript build process to not transpile [Baseline]

(<https://web.dev/articles/baseline-and-polyfills>) features, unless you know you must support older browsers. [Learn why most sites can deploy ES6+ code without transpiling]

(<https://developer.chrome.com/docs/performance/insights/legacy-javascript>)

Network dependency tree

Why: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

How to fix: [Avoid chaining critical requests]

(<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Time to Interactive

Result: 17.5 s

Why: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric]

(<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

How to fix: Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric]

(<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay

Result: 1,050 ms

Why: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

How to fix: The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric]

(<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).

Reduce unused CSS

Result: Est savings of 21 KiB

Why: Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/>).

How to fix: Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS]

(<https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/>).

Reduce unused JavaScript

Result: Est savings of 272 KiB

Why: Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript](https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/).

How to fix: Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript]

(https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/).

Reduce JavaScript execution time

Result: 9.9 s

Why: Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to reduce Javascript execution time]

(https://developer.chrome.com/docs/lighthouse/performance/bootup-time/).

How to fix: Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to reduce Javascript execution time]

(https://developer.chrome.com/docs/lighthouse/performance/bootup-time/).

Minimize main-thread work

Result: 16.1 s

Why: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/)

How to fix: Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. [Learn how to minimize main-thread work]

(https://developer.chrome.com/docs/lighthouse/performance/mainthread-work-breakdown/)

Avoid large layout shifts

Result: 2 layout shifts found

Why: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most.

Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing](https://web.dev/articles/cls#what_is_cls). [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

How to fix: These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. [Learn how to improve CLS](https://web.dev/articles/optimize-cls)

Best Practices — 77/100

Uses third-party cookies

Result: 2 cookies found

Why: Third-party cookies may be blocked in some contexts. [Learn more about preparing for third-party cookie restrictions](https://privacysandbox.google.com/cookies/prepare/overview).

How to fix: Third-party cookies may be blocked in some contexts. [Learn more about preparing for third-party cookie restrictions](https://privacysandbox.google.com/cookies/prepare/overview).

Issues were logged in the `Issues` panel in Chrome Devtools

Why: Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

How to fix: Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

Functionality — 60/100

Link could not be reached: signs@tagteamsigns.com

Why: The link could not be reached during testing.

How to fix: Check that the URL exists and is accessible.

Broken link: <https://www.facebook.com/TagTeamSigns-100587941708787>

Why: The link returned HTTP 400.

How to fix: Update the URL or remove the broken link.

Broken link: <https://www.linkedin.com/in/tag-team-signs-34985756/>

Why: The link returned HTTP 999.

How to fix: Update the URL or remove the broken link.

Responsive — 70/100

Horizontal overflow on Mobile

Why: The page content is wider than the mobile viewport (375px). This can cause horizontal scrolling or content to be cut off.

How to fix: Use responsive widths, max-width: 100%, flexible layouts, and avoid fixed-width elements that exceed the viewport.

Horizontal overflow on Tablet

Why: The page content is wider than the tablet viewport (768px). This can cause horizontal scrolling or content to be cut off.

How to fix: Use responsive widths, max-width: 100%, flexible layouts, and avoid fixed-width elements that exceed the viewport.

Problems & How to Fix

Performance — 15/100

Best Practices — 77/100

Page: <https://www.tagteamsigns.com/>

Uses third-party cookies

Result: 2 cookies found

Why: Third-party cookies may be blocked in some contexts. [Learn more about preparing for third-party cookie restrictions](https://privacysandbox.google.com/cookies/prepare/overview).

How to fix: Third-party cookies may be blocked in some contexts. [Learn more about preparing for third-party cookie restrictions](https://privacysandbox.google.com/cookies/prepare/overview).

Issues were logged in the `Issues` panel in Chrome Devtools

Why: Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

How to fix: Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

Functionality — 60/100

Page: <https://www.tagteamsigns.com/>

Link could not be reached: signs@tagteamsigns.com

Why: The link could not be reached during testing.

How to fix: Check that the URL exists and is accessible.

Broken link: <https://www.facebook.com/TagTeamSigns-100587941708787>

Why: The link returned HTTP 400.

How to fix: Update the URL or remove the broken link.

Broken link: <https://www.linkedin.com/in/tag-team-signs-34985756/>

Why: The link returned HTTP 999.

How to fix: Update the URL or remove the broken link.

Responsive — 70/100

Page: <https://www.tagteamsigns.com/>

Horizontal overflow on Mobile

Why: The page content is wider than the mobile viewport (375px). This can cause horizontal scrolling or content to be cut off.

How to fix: Use responsive widths, max-width: 100%, flexible layouts, and avoid fixed-width elements that exceed the viewport.

Horizontal overflow on Tablet

Why: The page content is wider than the tablet viewport (768px). This can cause horizontal scrolling or content to be cut off.

How to fix: Use responsive widths, max-width: 100%, flexible layouts, and avoid fixed-width elements that exceed the viewport.

UI / UX Analysis

<https://www.tagteamsigns.com/>

UI/UX Issue

Severity: Critical

The body text inside the 'OUR MISSION' section uses a dark red font color over a vibrant red background, severely failing accessibility standards and rendering the text nearly invisible.

Recommendation: Change the paragraph text color to white (#FFFFFF) to ensure high contrast and readability against the red background.

SIGNS DESIGN BUILD INSTALL

OUR SERVICES

WHO WE ARE

We are a Full Service Sign Company with Over 20 Years in the Industry.
We specialize in Commercial Building Signs, Storefront Signs and Monument Signs!

- Pan Channel Letters
- Reversed Pan Channel Letters
- LED Illumination
- Monument & Pole Signs
- Sign Cabinets
- Sign Service and Repair
- National Accounts
- Permit Processing
- Licensed, Bonded and Insured

Give us a call today for a Free Estimate!

OUR WORK

WORK

Discover how TagTeamSigns is your best resource for creative, quality sign solutions. Our highly trained staff is committed to give you exceptional customer service. From start to finish, you'll see how we make the most out of the latest technologies to design, create and install virtually any type of sign. We streamline the sign buying process for you from Concept to Completion.

OUR MISSION

TagTeamSigns was established in 2001 to make the process of purchasing high quality, cost effective signs available to everyone. When you work with TagTeamSigns you'll find your expectations met or exceeded. You'll find us professional and proactive in all of our practices. You'll be impressed with our efficient systems, use of technology and competitive pricing. From start to finish TagTeamSigns provides complete project management, designed with each client's unique needs in mind. This has made TagTeamSigns one of the most respected sign companies in Arizona for the past 20 years.

UI/UX Issue

Severity: High

The top hero banner displays large text but lacks any actionable primary button (e.g., 'Get a Quote' or 'Contact Us'), missing a key opportunity to convert primary visitors.

Recommendation: Add a prominent primary CTA button below 'SIGNS DESIGN BUILD INSTALL' leading directly to the estimate or contact form.

UI/UX Issue

Severity: High

The red bulleted list in the 'WHO WE ARE' section is placed over a light grayscale background image, causing poor contrast and reduced legibility.

Recommendation: Place the text list over a solid white or semi-opaque light background container, or use a darker, contrasting text color.

UI/UX Issue

Severity: Medium

The 'OUR SERVICES' section displays four tiny red icons on a dark gray background with no accompanying labels, text, or links, offering zero contextual value to the user.

Recommendation: Add clear text titles and short service descriptions under each icon, and increase icon size and contrast.

From start to finish, you'll see how we make the most out of the latest technologies to design, create and install virtually any type of sign. We streamline the sign buying process for you from Concept to Completion.

OUR MISSION

TagTeamSigns was established in 2001 to make the process of purchasing high quality, cost effective signs available to everyone. When you work with TagTeamSigns you'll find your expectations met or exceeded. You'll find us professional and proactive in all of our practices. You'll be impressed with our efficient systems, use of technology and competitive pricing. From start to finish TagTeamSigns provides complete project management, designed with each client's unique needs in mind. This has made TagTeamSigns one of the most respected sign companies in Arizona for the past 20 years.

UI/UX Issue

Severity: Medium

The header navigation links use a thin, small white font over the bright red top bar, making navigation items difficult to scan quickly.

Recommendation: Increase the header navigation font size and font weight for better legibility and target spacing.

UI/UX Issue

Severity: Medium

Large full-width blocks of saturated red are repeated across multiple sections (Hero, Our Work, Our Mission), creating visual fatigue and overwhelming the user.

Recommendation: Use red primarily as an accent color for CTAs, headings, and key highlights while using neutral white or off-white for full section backgrounds.
